

Engi-Tech, Its Corporate Website and Product Requirements Document (PRD)

Document Title: Engi-Tech Corporate Digital Platform & Product Ecosystem

Document Version: 2.0 (Comprehensive)

Status: Approved for Engineering & Design

Executive Summary & Brand Positioning

Core Positioning & Philosophy

Engi-Tech is defined as an **Engineering and Technology Company** that designs intelligent, smart solutions for businesses, industries, and people.

The name reflects its core framework:

- **Engi (Engineering):** Solving problems systematically.
- **Tech (Technology):** The toolkit and mechanism used to execute those solutions. AI, software engineering, automation, and data analytics represent capabilities within that toolkit rather than the core identity of the company.

Core Value Proposition (10-Second Visitor Clarity)

When a visitor arrives on the digital platform, they must understand three core points within 10 seconds:

- 1. **Who are we?** An Engineering & Technology Company.
- 2. **What do we do?** We design intelligent and smart solutions for businesses, industries, and people.
- 3. **Why care?** We help individuals and organizations innovate, automate, and grow.

Business Unit Architecture

Engi-Tech is structured into five distinct Business Units to organize products, services, and operations systematically:

Unit Breakdown & Target Sectors

Business Unit	Scope & Objective	Core Offerings & Capabilities	Target Sectors / Industries
1. Engineering Solutions	Helping physical and heavy industries solve complex engineering challenges.	• Engineering consulting • Digital twins • Simulation systems • Industrial analytics • Process optimization • Smart manufacturing	• Construction • Manufacturing • Energy • Oil & Gas • Automotive

2. Intelligent Tech Solutions	Helping organizations adopt and integrate digital technology tools.	• Custom Software Development • AI Solutions • Automation workflows • Business Intelligence • Data Analytics • Cloud Solutions	• SMEs • Healthcare • Education • Finance • Logistics
3. Products Division	Developing recurring platforms that solve standardized industry problems.	• Education: Tech LMS, WAEC & JAMB assessment platforms, School Management • Construction: Site Management, Quantity Tracking, Equipment Monitoring • Automotive: Fleet Management, Vehicle Diagnostics, Workshop Management • Creative/Music: Keyboard Learning Platform, Music Community	• Schools & Institutions • Building & Real Estate Contractors • Auto Repair & Logistics Hubs • Music & Content Creators
4. Innovation & Research	Incubating future concepts, internal applications, and IP.	• AI Research • Engineering Research • Internal Products • Functional Prototypes	Internal R&D, Corporate Partners, Academic Collaborators

5. Talent Development	Investing in talent to fuel the long-term innovation pipeline.	• Internships • Mentorship programs • Technical Workshops • Community Hub • Technical Bootcamps	Engineering & Technology Students, Early-career Developers, Industry Professionals
------------------------------	--	---	--

Site Navigation & Information Architecture

To keep the platform clean and professional, the site avoids listing individual app names or course titles in primary navigation bars.

Primary Navigation Structure

- └─ Home
- └─ About
- └─ Solutions
 - | └─ Engineering Solutions
 - | └─ Technology Solutions
 - | └─ AI & Automation
- └─ Products (Categorized by Vertical)
 - | └─ Education
 - | └─ Construction
 - | └─ Automotive

Explicit Navigation Exclusions:

The main navigation bar must **not** display itemized links such as [Courses](#), [LMS](#), [Keyboard](#), [WAEC](#), [JAMB](#), [Mentorship](#), or [Conference](#). These must sit cleanly inside their parent landing hubs.

Platform Modules & Functional Requirements

Industry-First Consultation Gateway (/contact & /industries)

Instead of starting conversations with generic IT services ("We build websites" or "We train programmers"), consultations begin within the client's industry context.

- **Functional Requirement:**

1. **Dynamic Selector:** The visitor selects their industry sector (Construction, Automotive, Education, Healthcare, Manufacturing, Finance, Government).
2. **Problem-Space Questionnaire:** The form dynamically loads relevant domain challenges:
 - *Construction Selection:* Options for Project Management, Digital Site Operations, Equipment Tracking, Quantity Tracking, or Field Service Coordination.
 - *Automotive Selection:* Options for Fleet Management, Vehicle Diagnostics, Workshop Operations, or Predictive Maintenance.
 - *Education Selection:* Options for Learning Platforms, School Management, or Assessment Systems (WAEC/JAMB).
 - *Business Operations Selection:* Options for Process Automation, Business Intelligence, CRM, or AI Assistants.
 - *Creative Industries Selection:* Options for Music Learning, Content Platforms, or Creator Tools.
3. **Automated Lead Routing:** Submissions automatically route to the corresponding Business Unit Lead with context pre-attached.

Universal Products Portal (/products)

Structured following a clear directory pattern (similar to product directories like Google's), preventing standalone app branding from diluting the main company identity.

- **Functional Requirement:**

- **Unified Grid:** Displays products across tabs: All, Education, Construction, Automotive, Business, Creative, and Research.

- **Product Card Specifications:**
 - Product Icon + Clean Title
 - 1-Sentence Problem & Solution Statement
 - Industry Badge (e.g., [#Construction](#), [#Automotive](#))
 - Action CTA ([Request Demo](#), [Access Portal](#), or [View Whitepaper](#))

Talent & Ecosystem Hub ([/careers](#) & [/talent](#))

Positions human capital development as an essential pillar of an innovation company (modeling organizations like IBM, Google, Microsoft, and NVIDIA).

- **Functional Requirement:**
 - Application management for Internships, Bootcamps, and Mentorship cohorts.
 - Workshop registration engine with automated calendar invites.
 - Community portal link for alumni and active mentees.

R&D & Research Hub ([/research](#))

- **Functional Requirement:**
 - Digital library for AI and Engineering research publications, whitepapers, and active prototypes.
 - Prototype preview showcase for internal R&D projects.

Non-Functional & System Specifications

Technical Architecture & Performance targets

- **Speed Benchmark:** Core Web Vitals target: First Contentful Paint (FCP) ≤ 1.0s, Largest Contentful Paint (LCP) ≤ 2.0s to ensure fast loading for enterprise decision-makers.
- **SEO & Indexing:** Dedicated dynamic metadata for each industry landing page (e.g., </industries/construction>, </industries/automotive>) targeting sector-specific search intents.

Implementation Roadmap

1. Phase 1: Architecture & Core Messaging (Weeks 1–2)

- Build core site framework, Home, About, and top-level navigation layout.

- Establish brand voice adhering strictly to problem-first, industry-focused positioning.
- 2. **Phase 2: Business Units & Industry Pages (Weeks 3–5)**
 - Deploy landing pages for Engineering Solutions, Intelligent Tech Solutions, Research, and Talent Development.
 - Build individual Industry pages (Construction, Automotive, Education, Healthcare, Manufacturing, Finance).
- 3. **Phase 3: Unified Product Directory & Interactive Consultation (Weeks 6–7)**
 - Deploy the Google-style Products page directory (Education, Construction, Automotive, Creative, Business).
 - Implement the dynamic industry consultation contact form.
- 4. **Phase 4: QA, Testing & Launch (Week 8)**
 - Verify 10-second messaging retention benchmarks across devices.
 - Audit lead routing workflows across all 5 Business Units.

Shift in Client Communication Strategy

Old Approach: *"We build customized web systems, mobile apps, and integrate AI chatbots."*

New Engi-Tech Approach: *"What industry are you in? Construction? Let's talk about how we can automate your field reporting and optimize your equipment allocation using smart digital tools."*

- **Sales Alignment:** Sales and consulting teams must lead with the client's sector problems, utilizing the technologies (AI, cloud, software engineering) as the silent machinery that powers the solution.
- **Product Governance:** New product ideas must fit into one of the designated product verticals (Education, Construction, Automotive, Business Operations, Creative Industries) before development resources are allocated.
